1. Current Account

As of June 2017, the 12-month current account balance slightly deteriorated compared to end-2016 and materialized at USD 34.4 billion. Meanwhile, the improvement trend in the current account balance excluding gold and in the current account balance excluding gold and energy, which are deemed core indicators, continued from the last quarter of 2016 through the second quarter of 2017 (Chart 1). According to seasonally adjusted data, the current account balance, with all its sub-indicators, slightly deteriorated during this period (Chart 2).

Chart 1. Current Account Balance (annualized, billion USD)

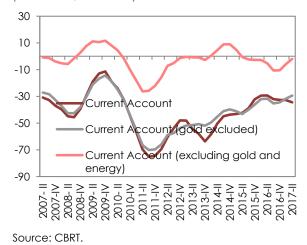

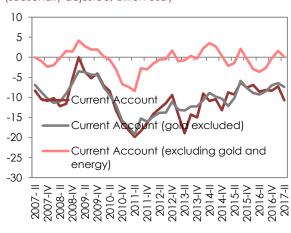

Chart 2. Current Account Balance (seasonally adjusted, billion USD)

Source: CBRT.

The recovery trend in core current account deficit indicators basically stemmed from the improvement in the core foreign trade balance (Chart 3). In recent years, exports grew at a higher rate than imports in gold-excluded terms, which was instrumental in the contraction of the foreign trade deficit (Chart 4). In the second quarter of 2017, exports excluding gold climbed by 8.6 percent on an annual basis, while imports excluding gold posted a moderate increase of 2.5 percent.

Chart 3. Foreign Trade Balance

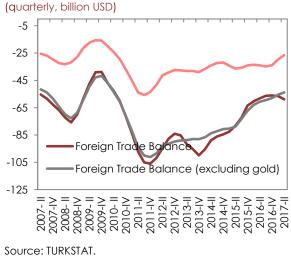

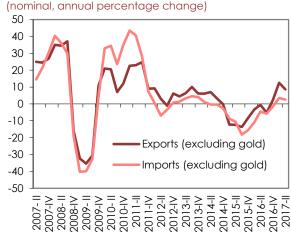

Chart 4. Nominal Exports and Imports

Source: TURKSTAT.

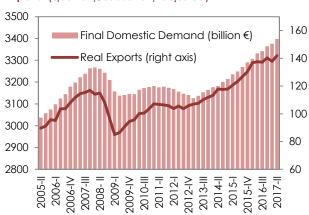

It is believed that the recent strong course of foreign demand and the flexibility of exporters in shifting between markets have played a significant role in the export performance. The export-weighted global growth rate has been displaying a stronger upward trend than the gross product-

based global growth rate since early 2016 (Chart 5). The final domestic demand-driven growth in European Union countries is catalyzing the increases in exports. EU countries account for almost half of Turkey's exports and about 60 percent of exports to these countries are composed of investment and consumption goods (Chart 6). In addition, the ongoing normalization in the relationships with peripheral countries also contributed to the sharp increase in exports in the second quarter of 2017.

Chart 5. Foreign Demand Index for Turkey (annual percentage change)

Chart 6. EU-28 Final Domestic Demand and Turkey's Exports (quarterly, seasonally adjusted)

Source: Eurostat.

The rise in import prices triggered by the surge in oil and other commodity prices, and the strong gold demand pushed up imports in the second quarter of 2017. In this period, the Turkish lira continued to depreciate on an annual basis whereas it moderately appreciated quarter-on-quarter. The CPI-based real exchange rate index increased to a value of 91 in the second quarter (Chart 7). Meanwhile, import prices and real imports rose by 5.4 percent and 3.8 percent year-on-year, respectively. Imports of gold in the April-June 2017 period almost doubled the imports of gold in the previous quarter and reached USD 5.3 billion. As a result of these developments, imports excluding gold posted a modest increase while total imports surged by 9.5 percent on an annual basis (Box 1).

Chart 7. Real Effective Exchange Rate (CPI-Based, 2003=100)

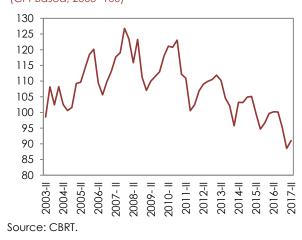

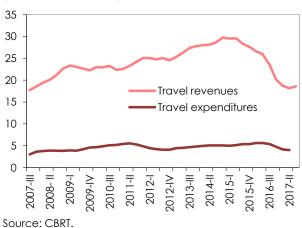

Chart 8. Travel Revenues and Expenditures (12-month, billion USD)

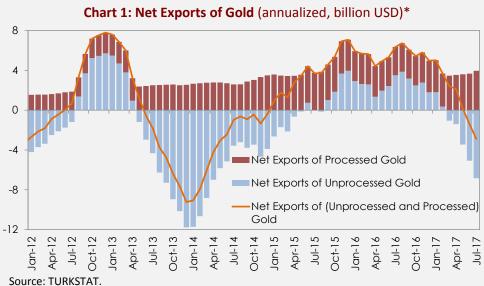

Travel revenues, which have a dampening effect on the current account deficit, increased annually in the second quarter of 2017 after declining in 2016. The number of tourists coming from peripheral countries, Russia in particular, escalated whereas the decline in the number of tourists particularly from Europe continued. As travel expenditures dropped while travel revenues increased in this period, net travel revenues posted a year-on-year increase and exerted a downward pressure on the current account deficit (Chart 8) (Box 2).

Box 1

The Role of Processed Gold Trade in Turkey's Foreign Trade of Gold

When someone talks about gold trade in the scope of foreign trade, the first thing that comes to mind is the exports and imports of gold bars. This item, which is roughly defined as unprocessed gold, refers to non-monetary gold in bars. A portion of this unprocessed gold is processed within the country and exported in the form of jewellery. Item no.71 in foreign trade chapters covers unprocessed gold bars as well as jewellery goods and accessories manufactured mostly from gold. The part remaining after unprocessed gold bars are removed from this item is referred to as processed gold in this box.

Historical data suggest that Turkey has assumed a net exporter role in the processed gold trade (Chart 1). The annual average of net processed gold exports was USD 0.9 billion (39.7 tons) in the pre-2011 period, whereas it has rapidly increased since then and reached USD 2.8 billion (60.9 tons). The relatively higher increase in USD-denominated net exports also reflects the rise in gold prices. On the other hand, imports of processed gold remained more stagnant throughout the period compared to exports. In this framework, the favorable impact of processed gold exports on the foreign trade balance has increased over years.

^{*} Net exports of gold has been calculated by deducting imports of gold from exports of gold.

Considering the recent foreign trade developments, the surge in imports of unprocessed gold in the first half of 2017 is significant. Turkey's exports of processed gold also increased in the same period. As for total foreign trade of gold (processed and unprocessed), exports and imports of gold amounted to USD 7.4 billion and USD 11.2 billion in the first seven months of 2017,

respectively. The inclusion of processed gold trade in the calculation considerably reduces the deficit in total gold trade in the related period. As a matter of fact, the deficit in foreign trade of non-monetary (unprocessed) gold was USD 5.9 billion in the first seven months of the year whereas the trade of processed gold composed of jewellery goods and accessories posted a surplus of USD 2.1 billion. Consequently, the deficit in total foreign trade of gold materialized at USD 3.7 billion.

On a country-basis, Turkey's largest export partners in processed gold trade are from the Middle East and North Africa (MENA) region, led by the United Arab Emirates (UAE) and Iraq (Chart 2). In addition to these countries, the USA and Germany also rank among the most important export partners of Turkey in the processed gold trade. On the other hand, Italy and the UAE have the largest share in Turkey's imports of processed gold as of the first seven months of 2017.

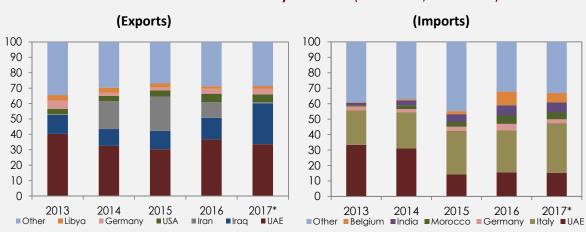

Chart 2: Processed Gold Trade by Countries (annualized, billion USD)

Source: CBRT.

To sum up, the share of processed gold trade in Turkey's gold trade has increased over the years. In this framework, it is believed that the surge in foreign demand for processed gold constitutes one of the reasons for the rise in imports of unprocessed gold. Accordingly, it would be more appropriate to evaluate the gold trade developments taking into account the total of these two items.

^{* 7-}month total as of July 2017.

Box 2

Recent Developments in Travel Revenues

The travel revenues item in the balance of payments statement is obtained from the "Departing Visitors Survey" conducted by TURKSTAT in the scope of the joint study of the Republic of Turkey Ministry of Culture and Tourism, the Turkish Statistical Institute (TURKSTAT) and the CBRT.

This survey covers foreign and Turkish citizens who live abroad and visit Turkey. According to survey results, travel revenues decreased by 2.2 percent year-on-year in the first half of 2017. Table 1 shows the number of visitors and the average spending in a breakdown by foreign and Turkish visitors. Accordingly, the number of total visitors surged by 8.8 percent in the first half of 2017 compared to the previous year, triggered predominantly by foreign visitors. In the same period, the average spending by foreign visitors and Turkish citizens fell by 7.2 percent and 17.7 percent year-on-year, respectively. Consequently, travel revenues from foreign visitors rose by 2.6 percent whereas travel revenues from Turkish citizens dropped by 17.5 percent (Table 1).

Table 1: Travel Revenues, Number of Visitors and Average Spending (January-June period)

Source: TURKSTAT.

To conclude, in 2017, there is a recovery in tourism in terms of the number of visitors. However, this recovery was not reflected in travel revenues in the first half of the year due to the decline in average spending.

2. Financial Account

In the first quarter of 2017, there was a recovery in global markets, particularly in the US, due to the expectations that the supportive fiscal policy will expedite growth in the US and the Fed will extend the monetary policy tightening over a longer term. This recovery continued in the second quarter of the year in an accelerated manner. Meanwhile, the stability in TL against other currencies and the recovery in economic growth were Turkey-specific factors that positively affected portfolio and other investment inflows in this period.

A breakdown of the balance of payments financial account by main headings reveals that the direct investment inflows, which had been flat at low levels for some time, maintained this trend. On the other hand, as a reflection of capital inflows to emerging markets, portfolio investment inflows via the liabilities item have been increasing. The downtrend in other investment inflows persists due to the decline in banking sector-driven loan inflows.

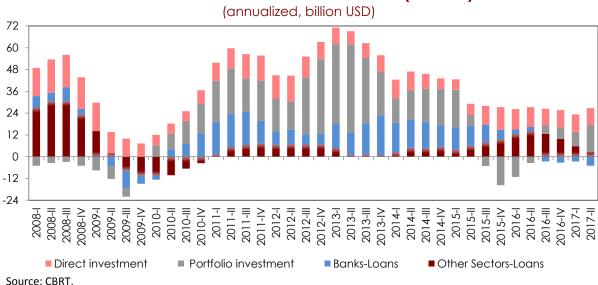

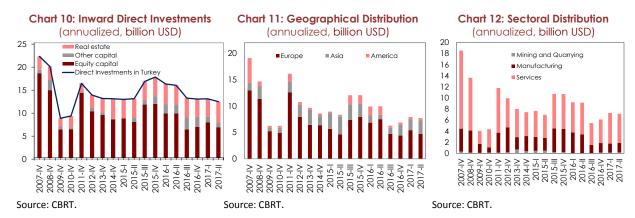

Chart 16. Financial Account and Sub-Items (Liabilities)

2.1 Direct Investment

Non-residents' direct investments in Turkey are mainly composed of capital and real estate investments. Inward direct capital investments that had been flat at low levels for some time maintained this trend in the second quarter of 2017 as well. The negative impact of geopolitical developments on the risk perception towards the region was the main reason for the low-level, flat trend in direct investment inflows in this period.

In the second quarter of 2017, Europe continued to be the primary region making capital investments in Turkey, with the services sector attracting the majority of investments. Meanwhile, real estate investments, which constitute another key component of inward direct investments, have posted a rapid increase since 2013 on the back of the amendment made in 2012 to the law facilitating acquisition of real estate by foreigners in Turkey, followed soon by the issue of the communiqué drawing up the application guidelines of this law. In the second quarter of 2017, real estate investments posted a year-on-year increase and stood at USD 1.4 billion.

2.2 Portfolio Investment

The main trend of portfolio investments is determined by non-residents' investments in Turkey. Portfolio investments are composed of the sum of residents' investments abroad (portfolio investment net acquisition of financial assets) and non-residents' investments in Turkey (portfolio investment net incurrence of liabilities). Residents' portfolio investments abroad, composed of the sum of banks and other sectors, dropped in the second quarter as banks reduced their portfolios abroad as a result of their liquidity decisions.

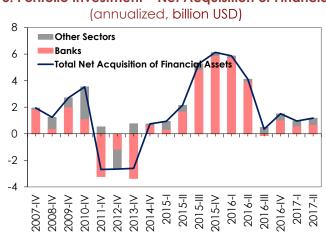

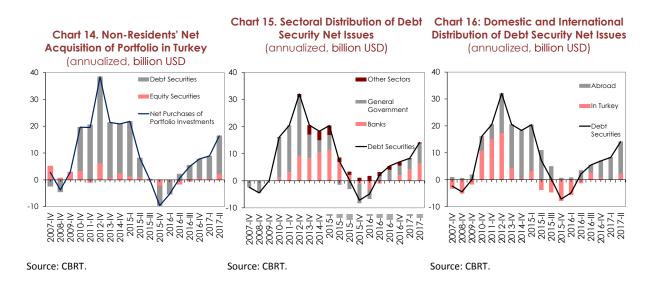

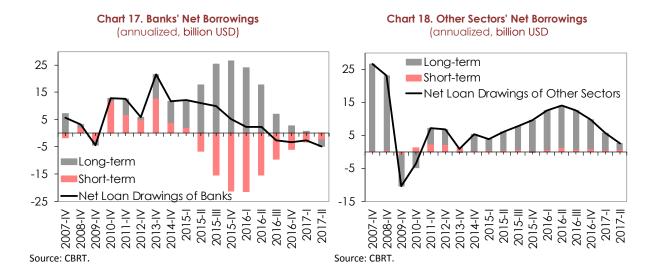

Chart 13: Portfolio Investment – Net Acquisition of Financial Assets

The expectation that the Fed will extend its monetary policy tightening over a longer term caused a high amount of portfolio inflows to emerging economies. Meanwhile, the stability in the TL against other currencies and the outlook of domestic growth expectations led to a positive divergence in Turkey's portfolio inflows. An analysis by instruments suggests that all items posted inflows, driven mainly by the debts securities issued by the general government in Turkey and the debt securities issued by the banking sector in markets abroad. On the other hand, equity securities also registered strong inflows in this quarter.

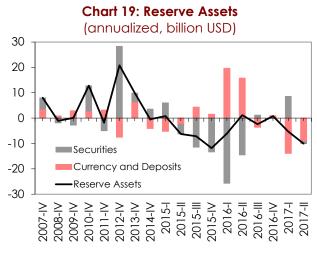

2.3 Other Investment-Loans

As for other investment inflows, FX loan utilization decreased in this period due to the fact that banks turned towards fund inflows through securities issues abroad. In the second quarter of 2017, banks were net payers of USD 791 million. Meanwhile, other sectors were net debtors of USD 1.3 billion worth of predominantly short-term loans.

2.4 Reserves

Central Bank reserves increased by USD 1.6 billion in the second quarter of 2017. The main driver of the rise in reserve assets was the inflows through portfolio investments.

Source: CBRT.

As for the quality of financing sources, reserve adequacy ratio and debt roll-over ratio have decreased slightly while other components remained the same.

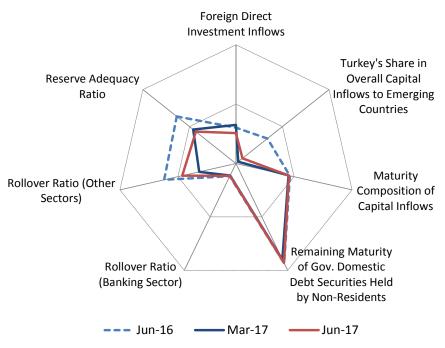

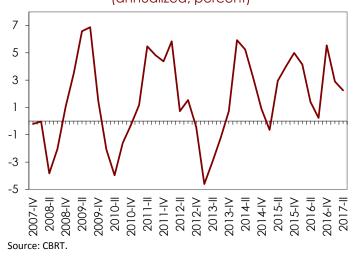

Chart 20. Current Account Deficit Financing*

^{*} Expansion outwards denotes improvement.

The Net Errors and Omissions (NEO) item was USD -1.6 billion in the second quarter of 2017. In annual terms, the 12-month cumulative NEO stood at USD 5.3 billion and its ratio to total FX inflows was 2.6 percent.

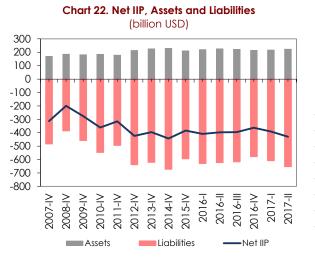

Chart 21. NEO and Total Foreign Exchange Inflows (annualized, percent)

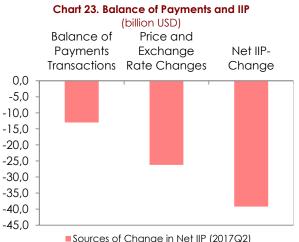

3. International Investment Position

In 2017Q2, the net International Investment Position (IIP), which is defined as the difference between Turkey's assets abroad and the liabilities to non-residents, increased on the negative side. The rise was driven by price and exchange rate movements. According to IIP data, by the end of June 2017, Turkey's net liability position increased by USD 10.0 billion compared to 2017Q1 and stood at USD 429.8 billion. In this period, external assets and external liabilities increased by 2.7 percent and 7.4 percent, respectively.

An analysis of the reconciliation calculations based on the comparison between flow transactions of the balance of payments and stock IIP data reveals that the rise in the net liability position in a negative direction was mainly driven by price and exchange rate developments. In the second quarter of the year, the BIST National 100 Index increased by 12.9 percent quarter-on-quarter, and the Turkish lira's appreciation against the USD by 3.6 percent was the main driver of the developments in exchange rates and prices.

Source: CBRT. Source: CBRT.

The other sectors had the highest net liability position with USD 275.8 billion, followed by the banking sector with USD 163.5 billion. The contribution of these sectors to the sum is 102.2 percent and developments in these sectors determine the general IIP. Meanwhile, while the Central Bank conventionally has a net asset position, the general government has a net liability position.

Table 1. IIP by Sectors (billion USD)

| | | 2016 | | | 2017-I | | 2017-II | | | |
|--------------------|--------|-------|------|--------|--------|------|---------|-------|------|--|
| Sector | Assets | Liab. | Net | Assets | Liab. | Net | Assets | Liab. | Net | |
| General Government | 2 | -91 | -89 | 2 | -92 | -90 | 2 | -102 | -100 | |
| Central Bank | 108 | -1 | 107 | 108 | -1 | 107 | 111 | -1 | 110 | |
| Banks | 43 | -193 | -150 | 44 | -200 | -156 | 46 | -209 | -164 | |
| Other Sectors | 62 | -293 | -230 | 64 | -315 | -251 | 66 | -341 | -276 | |
| Total | 216 | -578 | -362 | 218 | -608 | -391 | 224 | -653 | -430 | |

The developments in net IIP in 2017Q2 were mainly driven by banks' and the General Government's bond issues abroad, non-residents' purchase of GDDS and equity securities and improvement in equity securities stemming from price and exchange rate changes. An analysis by investment instruments reveals net liabilities stemming from direct investments increased by USD 12 billion quarter-on-quarter to USD 132 billion while net liabilities stemming from portfolio investments increased by USD 22 billion to USD 171 billion.

Source: CBRT.

On the liabilities side of the IIP, portfolio investments increased by USD 22 billion compared to the first quarter and this rise was driven by the USD 13.3 billion increase in balance of payments flow transactions and USD 8.8 billion increase in price and exchange rate changes. The increase in the balance of payments flow transactions was mainly driven by banks' and General Government's bond issues abroad of 8.5 billion and non-residents' purchase of GDDS at the amount of USD 3.5 billion.

Table 2. Liabilities: Sources of Change in Portfolio Investments (million USD)

| Flow-Stock Relation | 2017Q1 | BOP Transactions | Price and Exchange Rate Changes | 2017Q2 | Changes in Amount | % Change | |

Source: CBRT.

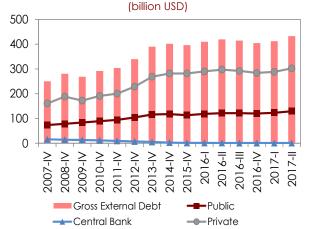

Long-term items still have weight on the liabilities side of the IIP. Approximately 71 percent of IIP liabilities across all sectors were long-term in the second quarter of 2017. In terms of sub-sectors, 86 percent of the Central Bank's, 69 percent of the General Government's and 77 percent of other sectors' liabilities were long-term liabilities. The share of long-term maturities in the maturity structure of the banking sector liabilities has progressively increased since 2015 in tandem with the Central Bank's decisions, and the mentioned share was 63 percent in this quarter.

Chart 25. Total Liabilities: Maturity Distribution

Source: CBRT.

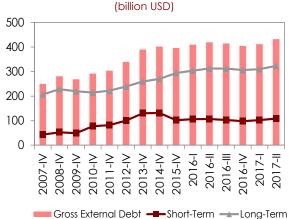

Basically, liability items of the IIP make up the main components of external debt stock. An analysis of the external debt stock data with respect to the related liability items indicates that the external debt stock posted a limited decline in 2017Q2 and materialized as USD 432 billion. By type of borrower, the private sector has the largest weight in gross external debt stock with a share of 70 percent. In terms of maturity distribution, the share of short-term debt has been decreasing over the last few years against a rise in the share of long-term borrowing. By 2017Q2, the share of long-term debt was 75 percent.

Chart 26. External Debt Stock: Distribution by Borrower

Source: Undersecretariat of Treasury.

Chart 27. External Debt Stock: Distribution by Maturity

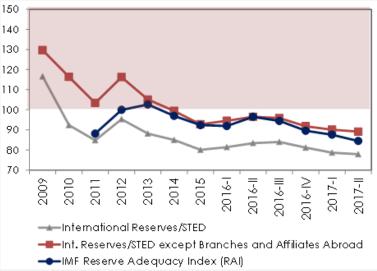

Source: Undersecretariat of Treasury.

In 2017Q2, the CBRT's gross international reserves dropped by USD 2.9 billion quarter-on-quarter to USD 108.7 billion. Banks' foreign assets at their correspondents abroad that constitute the other component of Turkey's international reserves rose by USD 8.2 billion to USD 25.1 billion. Meanwhile, the short-term external debt stock on a remaining maturity basis (STED), which is calculated based on the external debt maturing within 1 year or less, increased by 4.8 percent quarter-on-quarter to USD 171.6 billion. As a result, the ratio of total international reserves to STED, which is monitored as a reserve adequacy indicator, was recorded as 77.9 percent. This ratio becomes 89.2 percent when branches and affiliates abroad are excluded. The IMF Reserve Adequacy Ratio was calculated as 84.5 percent.

_

¹ This is an indicator defined by the IMF for emerging markets implementing a floating exchange rate regime as the ratio to the total of official reserves (30%* short-term debt stock + 15%*portfolio liabilities + 5%*broad money supply +5%*revenues from exports of goods and services) and the IMF deems such reserves kept at around 100-150 percent as "adequate".

Boxes in Balance of Payments and International Investment Position Reports

2017-I

Box 1. Foreign Creditor Profile in Government Domestic Debt Securities

2016-IV

Box 1. Net Errors and Omissions

2016-III

- Box 1. Latest Developments in Exports
- Box 2. Foreign Capital Inflows and Growth: A Graphical Analysis
- Box 3. Long-Term Loan Developments of Other Sectors

2016-II

Box 1. Integrated International Investment Position Statement (Reconciliation Table)

2016-I

- Box 1. Effects of Parity Developments on the Current Account
- Box 2. Real Estate Statistics on the Balance of Payments Table
- Box 3. Recent Developments in Securities Held by Nonresidents

2015-IV

- Box 1. Year-End Revisions in Balance of Payments Statistics
- Box 2. Compensation of Employees and Its Implications on Balance of Payments Statistics
- Box 3. Foreign Direct Investments in Turkey and a Comparison with Emerging Economies
- Box 4. Average Maturity of Outstanding Loans Received From Abroad by Non-Financial Private Sector Corporations

2015-III

- Box 1. Developments in Travel Revenues
- Box 2. Assessment of the Economic Relations Between Turkey and Russia from the Perspective of Balance of Payments
- Box 3. Key Factors of the Change in International Reserves
- Box 4. Net Errors and Omissions: 2008 and After

2015-II

- Box 1. Recent Developments Regarding Turkey's Energy Imports
- Box 2. The New Framework of the Reserve Requirements and the External Borrowing of the Banking Sector
- Box 3. Currency Composition of Loans that the Private Sector Receives from Abroad
- Box 4. Impact of Resource Utilization Support Fund (RUSF) Deductions on Commercial Loans

2015-I

- Box 1. Revisions Made in the Current Account in 2014
- Box 2. Updating Real Effective Exchange Rate Indices of Turkey
- Box 3. An Analysis of the International Investment Position by Sectors
- Box 4. Integrated International Investment Position Statement

2014-IV

- Box 1. Potential Risk Factors for Current Account Balance in the Near Future
- Box 2. Adjustments in the Goods Item in the Balance of Payments Statistics
- Box 3. Shuttle Trade
- Box 4. Reserve Adequacy with Respect to the Gross External Financing Requirement

2014-III

- Box 1. Impact of Conversion to the Sixth Edition of the Balance of Payments and International Investment Position Manual (BPM6) on Balance of Payments Statistics
- Box 2. Foreign Currency Composition of the Corporate Sector External Debt
- Box 3. The Net Errors and Omissions Item and Comparison Across Selected Countries

2014-II

- Box 1. Turkey's Practice in the Changeover to the 6th Edition of the Balance of Payments and International Investment Position Manual
- Box 2. Impact of the Geopolitical Tension in Iraq on Exports
- Box 3. Bonds and Bills Issued Abroad by the Banking Sector

2014-I

- Box 1. Evaluation of the Developments in Russia and Ukraine with Respect to the Balance of Payments Statistics
- Box 2. The Impact of Expectations Regarding the Quantitative Easing Program on Portfolio Investments in Turkey
- Box 3. Revisions in the Net Errors and Omissions Item

2013-IV

- Box 1. Impact of Economic Developments in the Euro Area on Foreign Direct Investments in Turkey
- Box 2. The Effect of Rediscount Credits on International Reserves
- Box 3. An Analysis on the External Debt Service in 2014

2013-III

- Box 1. Recent Developments in Exports to EU Countries
- Box 2. A Correction in Tourism Statistics about Syrian Refugees and its Impact on the Balance of Payments Statistics
- Box 3. International Investment Position: An Analysis of Turkey
- Box 4. Corporate Sector External Debt Stock

2013-II

- Box 1. Turkey's Energy Imports for Electricity Generation
- Box 2. The Impact of Turkey's Gold Trade on the Current Account Deficit and Recent Developments
- Box 3. Investment Income and International Money Market Rates
- Box 4. The ROM Facility and Structural Change in International Reserves

2013-I

- Box 1. Technological Structure of Foreign Trade in Turkey: 1990-2012
- Box 2. Maturity Structure of Non-Residents' Holdings of Securities
- Box 3. Outflows From the Net Errors and Omissions Item

2012-IV

- Box 1. Macro Display of the Quality of Current Account Deficit Financing
- Box 2. Domestic and Foreign Value Added Ratios in Exports
- Box 3. Methodological Revision in Tourism Statistics and Its Impact on Balance of Payments Statistics
- Box 4. IMF Lending Arrangements and Balance of Payments Statistics
- Box 5. A New Approach to Assessing Reserve Adequacy

2012-III

- Box 1. Latest Developments in Exports to the European Union and Middle East and North Africa Countries
- Box 2. FX Deposit Accounts with Letters of Credit and Super FX Accounts Flows and Net Errors and Omissions
- Box 3. Outstanding Loans Received From Abroad by Private Sector

2012-II

- Box 1. Latest Developments in the European Union and Exports by Sectors
- Box 2. Profile of Tourists Visiting Turkey and a General Analysis of Travel Revenues by Nationality
- Box 3. Composition of Non-Residents' Government Domestic Debt Securities

2012-I

- Box 1. Turkey's Export Performance with Respect to the Diversification of Product and Country Groups
- Box 2. Turkish Residents' Deposits Abroad and Net Errors and Omissions
- Box 3. Repo Transactions with Non-Residents
- Box 4. Net International Reserves

2011-IV

- Box 1. Loan Expansion and Current Account Balance
- Box 2. Repercussions of the Developments in Syria on Turkey's Exports
- Box 3. Current Account Deficit and Financing Items
